

CARE & MAINTENANCE INSTRUCTIONS

This range of handles is forged in Italy using the finest quality solid brass and arrive at Windsor in their raw state to be processed and hand finished.

To create the different finishes, we use a variety of metal treatments, then the finish is relieved-back by hand, by one of our specialist craftspeople, producing a collection of natural patina finishes. The finish is then coated with a resin lacquer to protect the colour and provide a high gloss finish.

It is recommended that all painting or staining of the doors is completed prior to installation of the door handles.

SATIN BRASS

It is recommended to be kept free of dust and grime to prevent any chance of these particles affecting the integrity of the lacquer and potentially causing breakdown or discolouration. We suggest these are wiped and cleaned periodically using a mild window cleaner and damp cloth. You may get some light surface scratches appearing with normal wear and tear, for this we recommend occasionally using the Windsor wax polish and rubbing this lightly over the affected area which will provide a layer of protection for extended finish longevity. Avoid using metal polishes or abrasive cleaners as they will damage the lacquer and cause it to go cloudy. Do not wash in hot water as this can remove the lacquer.
